

New hybrid nanostructures of C<sub>60</sub> fullerene based on an amphiphilic copolymer of *N*-vinylpyrrolidone and (di)methacrylates

Svetlana V. Kurmaz and Nadezhda A. Obraztsova

**Figure S1** The absorption spectra: (a) of the solution after addition of 0.1 ml C<sub>60</sub> solution in toluene in the absence of copolymer (1) and solution containing 7 mg ml<sup>-1</sup> of the copolymer immediately after addition 0.1 ml of the fullerene solution in toluene (2), 4 (3) hours later, and 2 (4), 14 (5) 19 (6) days; (b) solution containing 15 mg ml<sup>-1</sup> of the copolymer immediately after addition 0.1 ml of the fullerene solution in toluene (1), 1 (2) 3 (3) 15 (4), 20 (5) days, respectively.
